

A SPECIAL EDUCATOR SAYS

IT IS IMPORTANT TO KNOW

1. Practice makes perfect!

Regardless of ability level, with regular usage and training, all students will become proficient with technology.

2. Use technology across ALL settings.

This includes home, school, and extracurricular activities.

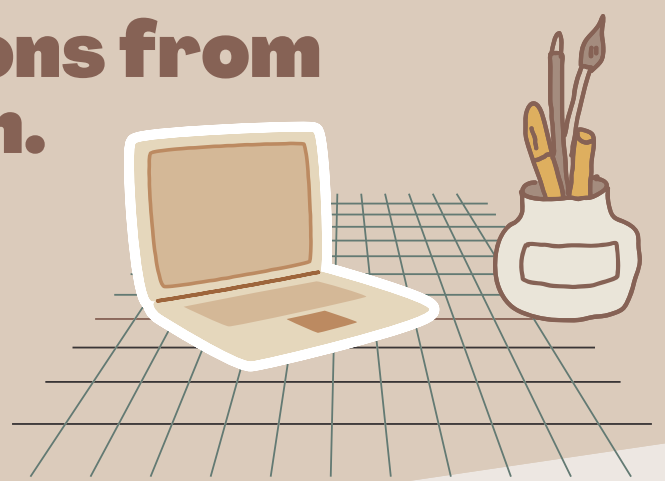

3. Related service providers can help you choose technology.

Consider discussing technology usage in the classroom with speech-language, occupational, physical, or other therapists to meet individuals' needs.

4. Consider all options from no-tech to high-tech.

Use MTSS or RTI to determine accessible tier 1 support all students can use.

5. Please ask!

Need language added to a communication device? Please ask us. We love to support the inclusion of students with disabilities. We are not too busy!

6. From pencil grips to software to AAC, teacher modeling and regular usage will normalize the experience for the entire classroom.
